SUMMARY

I've been bringing AI into real work since 2024, and I build automations that non-technical teams keep using long after I hand them over. At Brandpackaging GmbH I automated the CEO's daily update of a 3,900-row order list, and a sheet alert I wrote caught a customer's accidentally deleted POs in its first week. I took a Western Cape real-estate agency from no newsletters to two a month, and my subtitle pipeline for Senken won first place in RAY AI's internal AI and automation competition. I work mostly in Claude, MCP and Make.com, with a BSc in Dietetics and hospital systems experience from Waikato Hospital behind me.

EXPERIENCE

AI Implementation Specialist · RAY AI

Feb 2026 to present

Remote. RAY AI hires and pays me and places me with one client CEO at a time. Moving from Senken to Brandpackaging was a new RAY placement, not a job change.

Brandpackaging GmbH · Goch, DE

Sep 2026 to present

EA and AI implementation for the CEO of a 16-person packaging manufacturer.

- **Sheet change alert.** A key customer kept changing delivery dates in a shared sheet without telling anyone, and the team was re-typing them by hand. I wrote a Google Apps Script that checks the sheet every 30 minutes and emails eight people the exact cells that changed, old value next to new. It has run since September with a 0% error rate. In the first week it caught POs the customer had removed by accident, and they confirmed the mistake. The script can only read the sheet, and it comes with a handover runbook.
- **Open-order list.** The CEO used to update a 3,900-row order list with 12 years of history by hand. Now an automation reads the 07:00 closure emails from MyFactory, the company ERP, and marks those projects closed in the Excel file on OneDrive. Anything it can't match lands in an exception queue for me, and every change is logged so it can be checked or rolled back.
- **MyFactory skill.** The ERP runs in German and its process docs are scattered across a SharePoint wiki. I turned my ERP orientation transcript and that wiki into a Claude skill (a reusable instruction pack that teaches Claude a task) with a glossary, 16 procedures and the path from quote to order to invoice. With it, Claude in Chrome can find its way around the menus and open the right project documents. It also writes onboarding material for new staff, tailored to their role.
- **Automations register.** A Notion page for the automations that actually run. If a person still has to start it each morning, it doesn't go on the list. Each entry gets the same eight-part runbook, including which account it runs on and how it can fail without anyone noticing, so someone else could take it over tomorrow.
- **Teaching the team.** I ran the CEO's Notion and Claude orientation, covering how Claude writes meeting notes into Notion, what Claude Code can do on a laptop, and which model to pick for which job. Later I set the project manager up in Claude and connected his Notion and Microsoft 365 while we were on the call.

Senken · Berlin carbon-markets SaaS

Feb 2026 to Aug 2026

AI implementation and executive support for the CEO.

- **Champion finder.** Sales needed to know who to call at large accounts. I built a workflow that cross-references LinkedIn and meeting transcripts to find sustainability decision-makers, then tags each one in HubSpot as champion, decision-maker, influencer or adjacent. We used it on Phoenix Group, BSH Hausgeräte, Alcon, Flender and others.
- **Subtitle pipeline.** Carbon-market terms kept coming out wrong in auto-captions. I built a Make.com and Claude pipeline where AssemblyAI transcribes each episode and Claude cleans it against a glossary without touching the timestamps. It took first place in RAY AI's internal AI and automation competition. [Case study](#).
- **Podcast Painkiller.** Post-production for the show was a long manual job, so I built an agent for it. It takes the raw recording, edits the transcript, cuts the video to match, adds timestamped English and German subtitles and uploads the episode to YouTube. What used to take several steps now takes one.
- **Org mapping.** Used Claude to map a target company from transcripts, Slack and LinkedIn. The map was used for a real senior hire, and I later published the method. [Demo](#).
- **Carbon Weekly News.** I produced Senken's weekly carbon-markets show. I launched it on 8 platforms including YouTube, Spotify and Apple Podcasts, made the English and German subtitles, worked with a freelance video editor, and looked after guests, thumbnails and CRM clean-up between South Africa and Germany.

Automation Consultant (freelance) · Harcourts Platinum Real Estate

Apr 2026, alongside RAY AI

Handed over and still in use. Independent project for a Western Cape real-estate brand: 3 Make.com automations, 2 Claude web-search agents and 2 Claude skills. I built it alone, from scoping and the PropData API integration to error handling and handing it over to a team with no technical background.

- **Monthly newsletter.** A research agent pulls current market data from SARB, ooba, Lightstone and local Helderberg sources and passes it as JSON to a Claude skill that writes "The Helderberg Homeowner" in email-safe HTML. The draft goes through GitHub to a one-click approval. Once Jan approves, a webhook publishes it to Everlytic and Facebook. The agency went from no newsletters to two every month: The Helderberg Homeowner and one for rentals.
- **Investment finder.** Every two weeks a second agent checks rents on Property24, Private Property, TPN and PayProp across Somerset West, Strand and Gordon's Bay. A scoring skill rates each new PropData listing on rental yield, lock-up-and-go fit, capital growth and short-term rental potential, and sorts it into Tier A, B, C or Rejected. When A or B listings turn up, a branded brief goes to a segmented investor list on Everlytic. [Newsletter repo](#) · [investor brief repo](#).

Career break and self-directed training

Sep 2024 to Jan 2026

- At home with two young children while teaching myself front-end development (HTML, CSS, JavaScript) from January 2025.
- Built personal projects that became the base of my portfolio.

Prospector & EA · Harcourts Platinum Real Estate

Jun 2024 to Aug 2024

- Cold-called prospective sellers and landlords for the agency, and supported the COO as EA.
- Created marketing materials in Canva, PropData and Lightstone.
- Helped the marketing team start using ChatGPT in their daily work, and experimented with Zapier to automate small tasks.

Diet Technician · Waikato Hospital

Hamilton, NZ · Feb 2023 to Aug 2023

- I ran the hospital's nutrition software for meal plans, allergies, menu changes and special diet requests, often in several systems at once where mistakes had real consequences. Much of the job was turning complicated requirements into calm, step-by-step help for clinical staff and patients.

PERSONAL PROJECT

- **Heart-first meal planner.** A medication-aware Mediterranean meal planner for a household living with heart disease, where my dietetics training meets AI. It flags things like potassium supplements for the cardiologist to confirm, since any real plan still needs a doctor to sign it off. [Demo](#) (names anonymised).

EDUCATION

BSc Dietetics · North-West University (Potchefstroom)

2019 to 2022 · Conferred Apr 2023

Four-year science degree majoring in Biochemistry, Physiology and Nutrition Science, with distinctions in Biochemistry, Descriptive Statistics, Physiology (Excretion, Membrane and Muscle), Chemistry, Nutrition and Health Sciences modules. The final two years were fully online, and my honours work included teaching patients across language and literacy barriers.

SKILLS, STACK & CERTIFICATIONS

AI & Automation: Claude / Anthropic API, OpenAI / GPT, Claude Code, Claude skills, Claude in Chrome, LLM workflows, AI agent design & orchestration, prompt engineering, MCP (Notion, Microsoft 365, Clay, HubSpot, Slack, Gmail), Make.com, n8n, Zapier-class low-code automation, APIs, webhooks, JSON, error handling & logging.

Ops, CRM & RevOps: HubSpot (CRM automation, champion mapping, data hygiene), Clay, Everlytic (email marketing), PropData, Lightstone, Canva, Notion (workspace & database design), Microsoft 365 (Outlook, Teams, OneDrive, SharePoint, Excel), MyFactory ERP, Slack, Gmail, Google Calendar, marketing operations, AI implementation & enablement, stakeholder training & handover, exec support.

Build & Web: HTML, CSS, JavaScript, Google Apps Script, email-safe HTML, bookmarklets, GitHub, GitHub Pages, front-end (self-taught).

Comms & Languages: Plain-English technical writing, runbooks and handover · English (native), Afrikaans (fluent).

Anthropic Certs: Claude 101, Claude Code 101, Claude Code in Action, Introduction to Claude Cowork, AI Fluency, Enterprise Train the Trainer.

HubSpot Certs: AEO Fundamentals, Revenue Operations.

Referees available on request.
